COLDTAINER FOR DI.AL. VENDING: MULTI-TEMPERATURE TRANSPORT FOR A HISTORICAL AUTOMATIC DISTRIBUTION COMPANY

This year is the fiftieth anniversary of the DI.AL. VENDING company. The business, born in the 1970s, was truly pioneering for its time, since vending machines for catering services were still not widespread. The company, based in Lecce (Italy), today operates in the geographical area of southern Puglia and it's part of the "E' Ora" network of companies that operates at a national level.

Why Coldtainer

Mirko Dionisi of DI.AL. Vending explains the reasons for choosing Coldtainer: "Our company completes its offer of products through automatic dispensers with food that are managed with a cold chain both at positive temperatures (sandwiches, rolls, yogurt) and at negative temperatures (pre-packaged ice cream). The HACCP protocol, to which we strictly adhere, requires us to protect the integrity of the product. This requires the use of special refrigerated containers at a controlled temperature that can be used alternatively at positive or negative temperature".

easy cooling, smart moving

Mirko Dionisi continues by saying: "When we had to choose a product on the market that could guarantee effective refrigeration, resilience of use at high ambient temperatures and that would reduce the space taken up in our vans to a minimum, we had no hesitations in contacting Coldtainer. I have already had the opportunity to use one of their products in the past which proved to be highly performing and after many years it still works perfectly. It wasn't difficult to find the one best suited to our needs in their large product portfolio"

Coldtainer plus

The advantages of Coldtainer found by DI.AL. Vending machines are:

- 1) The product purchased by us can be set to work at both positive and negative temperatures, avoiding duplicate equipment and therefore immediately saving in terms of purchase costs but also reducing logistics handling.
- 2) The product we purchased is powered by two rechargeable lithium batteries which allows us to free ourselves from direct charging via the alternator of the truck that transports it. In this way we avoid accidentally reducing the voltage of the vehicle battery and avoiding the installation of accessory circuits on the vehicle for managing charging. Furthermore, it allows you to use it continuously 24 hours a day by externally recharging two other backup batteries that can be purchased separately.
- 3) The external dimension of the product, chosen by us from a vast choice available, essentially eliminates the waste of space inside the loading area of our vehicles by making the most of the loading compartment to transport other products.
- 4) The refrigeration unit proved to be very performing (this was a pleasant confirmation of what we already knew) and allows us to reach the working temperature quickly. Furthermore, Coldtainer previously provided us with exhaustive documentation including field tests of how the product works and how the cold chain is maintained, simulating realistic and intensive use.
