## COLDTAINER FOR DOLOMATIC: CONTROLLED TEMPERATURE FOR A VENDING COMPANY

Dolomatic is a vending company based in Lavis in Trentino Alto Adige (Italy) and which operates in northern Italy: In addition to Trentino, it offers its services in the province of Verona and on the Brescia side of Lake Garda. The company is part of Buonristoro, the second largest Italian group in the sector by sales, and boasts a fleet of its own vehicles managed by over 150 employees.

### Why Coldtainer

The manager of the Lavis office explains the reasons for choosing Coldtainer: "In 2008 our company also started distributing fresh products, so we equipped ourselves with refrigerated vans. We immediately realized that they did not satisfy our needs due to lack of space optimization, so we tried using containers from various brands but they too were inefficient for various reasons.

easy cooling, smart moving

These solutions forced us to waste a lot of time and money given the difficulty of finding a partner on the market who could provide us with a complete product and not single elements to assemble. The further problem was the inability to remain at temperature with the waste of the fresh products. When we finally relied on Coldtainer we solved these practical problems, also finding exceptional temperature maintenance (especially in the summer period)". The refrigerators chosen by the company are the Coldtainer F0330 NDN AuO models, which are autonomous in operation. The AuO versions are equipped with an integrated rechargeable battery which makes them independent of the vehicle's electrical system. The capacity of the batteries guarantees the Coldtainer an autonomy of more than 8 hours, even in the most demanding conditions of use. By choosing these versions you have maximum flexibility in terms of use and setup, as it is not necessary to prepare any wiring on the vehicle to power the refrigerator.

The containers are used on board Fiat Ducato vans: "The only precaution we took was to fit protections so as not to damage the fridge during the movement of the goods during the loading/unloading phases and to place products on it to be transported at room temperature".

### Coldtainer plus

Flexibility of use and versatility are the Coldtainer advantages most appreciated by Dolomatic "The containers are easily loaded on board our vehicles without the need for any additional modifications to the vehicle. In the evening we connect the fridge to the electricity, so the remaining goods are always fresh and in the morning we leave for our deliveries with the fridge already at temperature and the battery charged for daily operation. And we no longer have fears because we have now tested the efficiency of the fridges and we are fully satisfied. The solution is outstanding, we no longer had to purchase backup batteries."
